

FORENSIC ANALYSIS REPORT Case Reference: EIGHT.dd Analysis
Date of Report: Friday, Oct 2, 2026, 14:07:46 Subject: Carved File Summary
from Disk Image EIGHT.dd

1. EXECUTIVE SUMMARY

On October 2, 2026, a file carving operation was performed on the disk image EIGHT.dd using the Foremost v1.5.7 tool. The objective was to recover deleted or unallocated data from the 241 MB image. The process successfully identified and extracted 44 individual files across six distinct file formats.

2. ANALYSIS PARAMETERS

- **Source Image:** EIGHT.dd
- **Image Size:** 241 MB (252,968,960 bytes)
- **Tool Used:** Foremost version 1.5.7
- **Execution Timestamp:** Fri Oct 2 14:07:35 2026
- **Completion Timestamp:** Fri Oct 2 14:07:38 2026
- **Output Directory:** /home/bdsh/forensicEvidence/caseFileExamples/diskImages/Ninemost/outputs

3. DATA RECOVERY FINDINGS

The carving process yielded a total of **44 files**. The distribution of recovered data by file type is as follows:

File Extension	Count	Notable Observations
.png	18	Primarily small-scale assets (e.g., 341 B to 12 KB).
.jpg	12	Includes significant files up to 2 MB.
.ole	5	Contains two large files (5 MB each) at offsets 2191360 and 2306048.
.gif	4	All recovered GIFs are uniform 50x50 pixel icons.
.zip	4	Compressed archives recovered from the 19 MB offset range.
.jar	1	Java Archive recovered at offset 7911936.

File Extension	Count	Notable Observations
.pdf	1	One linearized PDF recovered at offset 1064960.

4. TECHNICAL OBSERVATIONS

- **Data Clustering:** A significant concentration of PNG and GIF files was identified in the 8 MB to 19 MB offset range, suggesting a cluster of web-related or UI assets.
- **Large File Identification:** The recovery of two 5 MB **.ole** files and several 2 MB **.jpg** files indicates the presence of larger, potentially more significant documents or images within the unallocated space.
- **Integrity:** The carving process was completed in 3 seconds, indicating a highly efficient scan of the 241 MB image with no reported errors during the extraction of the 44 identified headers.
