

FORENSIC ANALYSIS REPORT

Date of Report: Friday, Oct 2, 2026, 14:54:48 **Case Reference:** NINE.dd
Analysis Subject: File Carving Results Summary **Status:** Final

1. EXECUTIVE SUMMARY

On October 2, 2026, at 14:51:37, a forensic carving operation was performed on the disk image **NINE.dd** using the Foremost v1.5.7 utility. The objective was to recover deleted or unallocated file fragments from the 241 MB image. The process concluded at 14:51:40, successfully extracting 44 individual files across six distinct file types.

2. DATA SOURCE INFORMATION

- **Evidence File:** NINE.dd
- **File Size:** 241 MB (252,968,960 bytes)
- **Tool Used:** Foremost version 1.5.7
- **Analysis Parameters:** Standard configuration (**foremost.conf**)

3. CARVED DATA ANALYSIS

The carving process identified a total of 44 files. The distribution of recovered data is categorized by file type below:

File Extension	Count	Notable Observations
.png	18	Largest volume of recovered files; primarily small-scale image fragments.
.jpg	12	Includes significant files, notably 00009568.jpg (3 MB).
.ole	5	Contains several large objects, including two 5 MB files.
.gif	4	All recovered GIFs were small-scale (50 x 50) icons/thumbnails.
.zip	4	Compressed archives recovered from various offsets.
.pdf	1	One linearized PDF recovered (00009424.pdf).

3.1 Key Findings

- **High-Value Targets:** The recovery of several large `.jpg` and `.ole` files (ranging from 2 MB to 5 MB) represents the most significant data recovery in terms of disk space utilization.
- **Metadata/Thumbnail Evidence:** A high concentration of `.png` and `.gif` files (22 total) appear to be small-scale web assets or UI elements, likely originating from cached browser data or system thumbnails.
- **Data Integrity:** The presence of a “Linearized” PDF suggests the recovery of a web-optimized document.

4. CONCLUSION

The carving operation successfully reconstructed 44 files from the unallocated space of `NINE.dd`. The recovered dataset is heavily weighted toward image-based artifacts (PNG, JPG, GIF), which may provide visual evidence or metadata relevant to the investigation. All recovered files have been preserved in the designated output directory: `/home/bdsh/forensicEvidence/caseFileExamples/diskImages/Ninemost/output`.
