

FORENSIC ANALYSIS REPORT: FILE CARVING RESULTS

Case Reference: Three.dd Analysis
Date of Report: Friday, October 2, 2026
Time of Report: 14:38:55
Analyst Role: DFIR Reporting Assistant
Subject: Automated File Recovery via Foremost Carving

1. EXECUTIVE SUMMARY

On October 2, 2026, at 14:38:42, a forensic carving operation was performed on the disk image **Three.dd** using the Foremost v1.5.7 utility. The objective was to recover deleted or unallocated files from the provided 241 MB image. The process was completed successfully at 14:38:45. The carving operation identified and successfully extracted 17 individual files across five distinct file formats.

2. EVIDENCE SOURCE

- **Evidence File:** **Three.dd**
- **File Size:** 241 MB (252,968,960 bytes)
- **Format:** Raw Disk Image
- **Analysis Tool:** Foremost version 1.5.7

3. DATA RECOVERY FINDINGS

The carving process identified a total of **17 files**. The recovered data consists of various image formats, compressed archives, document objects, and a PDF document.

3.1 File Type Distribution

File Extension	Count	Description
.jpg	8	JPEG Image Files
.ole	5	Object Linking and Embedding (Microsoft Office/Compound File)
.zip	2	Compressed Archive Files
.png	1	Portable Network Graphics
.pdf	1	Portable Document Format (Linearized)

3.2 Detailed Extraction Log (Summary) The following table details the specific offsets and sizes of the recovered artifacts:

Index	Filename	Size	File Offset (Bytes)
0	00000552.jpg	640 KB	282,624
1	00001840.jpg	4 MB	942,080
2	00011328.jpg	984 KB	5,799,936
3	00013393.jpg	23 KB	6,857,499
4	00013494.jpg	77 KB	6,909,205
5	00013696.jpg	73 KB	7,012,423
6	00015520.jpg	2 MB	7,946,240
7	00020160.jpg	138 KB	10,321,920
8	00013304.ole	20 KB	6,811,648
9	00013344.ole	20 KB	6,832,128
10	00013384.ole	5 MB	6,852,608
11	00013472.ole	106 KB	6,897,664
12	00013688.ole	5 MB	7,008,256
13	00013650.zip	3 KB	6,989,177
14	00015202.zip	3 KB	7,783,794
15	00013844.png	677 KB	7,088,343
16	00020440.pdf	69 KB	10,465,280

4. OBSERVATIONS & ANALYST NOTES

- **Clustering of Data:** A significant cluster of file activity (including OLE, ZIP, and PNG files) is concentrated within the offset range of 6,811,648 to 7,088,343. This suggests a high density of deleted or fragmented data in this specific sector of the disk image.
- **Document Integrity:** The recovered PDF (00020440.pdf) was identified as “Linearized,” which is a standard optimization for web-viewable PDFs.
- **File Integrity:** All 17 files were successfully carved and written to the output directory: /home/bdsh/forensicEvidence/caseFileExamples/diskImages/Ninemost/output.

5. CONCLUSION

The carving operation successfully recovered 17 artifacts. The presence of OLE objects and ZIP archives alongside various image formats suggests the disk image may contain remnants of user-generated content or document-based communications. Further manual inspection of the recovered OLE objects and ZIP archives is recommended to determine the contents of the recovered data.
