Artefact Table 13

Introduction

This report contains an overview of the files contained in the file ‘THREE.dd’ after the application of Foremost. It will include a list of all the files found after file carving with screenshots of their contents. An analysis of the files can be found at the end of the document.

Files

The ‘THREE.dd’ file contains a total of 17 files including 8 jpgs, 5 oles, 2 zipped files, 1 png and 1 pdf. All files appear to be intact with the exception of one ole file which cannot be opened due to corruption. Files will be reported in the same order as the ‘audit.txt’ file records them which is a file that Foremost automatically generates after it is run.

```
Foremost version 1.5.7 by Jesse Kornblum, Kris Kendall, and Nick Mikus
Audit File

Foremost started at Sun Sep 20 15:46:41 2026
Invocation: foremost THREE.dd
Output directory: /home/pcadmin/Desktop/Artefacts/Working/THREE.dd/output
Configuration file: /etc/foremost.conf

JPG

00000552.jpg

This image displays a low-quality photograph of a cruise ship on the water. It appears to be taken by a person standing on the shore as there appears to be the silhouette of a plant's leaves in the foreground. The ocean is calm and it is a sunny day with and minimal clouds and sunlight reflecting off of the side of the ship.

00001840.jpg

This image displays two items sitting on a desk. The topmost item appears to be a briefcase due to what looks like a handle, is connected to the top of the object. This object has the label 'GEN' written on the front. The bottom object looks like a device sitting in a case that has the word 'Kensington' written on the case part of the object. The device has the 'Windows' logo in a shiny material and the fingers of the person holding what is likely to be a phone, can be seen in its reflection. The reasoning behind why it is a device is because a small camera and two lights sit on the top half and 'Window's is owned by the company 'Microsoft' which is a technology corporation.

0011328.jpg

This file contains a photo of a severely damaged connector socket on a power board that has been burnt out and melted on the leftmost side of the board. The other sockets to the right of the burnt-out socket appear undamaged but the plug has also been severely damaged. The text on the board reads ‘Click’. ‘MAX TOTAL LOADING 10A 2400W FOR INDOOR USE ONLY’.

00013393.jpg

This image depicts a group photo of football players that has a title along the bottom that reads “THE NEW ZEALAND FOOTBALL TEAM WHICH HAS BEEN SO SUCCESSFUL IN ENGLAND.” There appears to be an extra three lines of text which are most likely to be the names of the players in the photo but cannot be read due to the low quality of the image. Because the photo isn’t perfectly centred and you can see the edge of the page and what might be a table in the jpg, it is safe to assume that the photo of the Football players was taken by someone holding a phone over whatever it was printed in.

00013494.jpg

This file depicts an image of a medium-sized, medium-hair length grey cat sitting politely in the centre of the frame. From the background surroundings, this photo appears to be inside somebodies home because it features a mirror hanging on a wall and various other homely items. The image features a watermark on the bottom of the image that reads “CUTESTPAGE.COM” with a small emoji. This photo has suffered severe corruption artefacts likely due to the file carving process and most of the image is discoloured shades of a bright green.

00013696.jpg

This file contains an image of the Sydney Opera house on a sunny, calm day with no clouds. The picture is taken a few hundred metres from the opera house itself and is approximately in 720p resolution. The image is unedited save for the one key feature of the image – the Opera house is decorated in thick red lines across the top edge of the building and one line vertically down the centre. One peak of the building has a drawing of a red rose adorned on it similar to the red lines. The decorations appear to be mimicking the Flag of England.

00015520.jpg

This file contains an image of a person holding a thermometer to the camera which can be discerned from the text on the object reading “TDS/TEMP”. It appears that this photo was taken from a person’s own home as the background is blurry but appears to contain a rug on the floor and the legs of a chair. The thermometer reads “990” on the display screen.

00020160.jpg

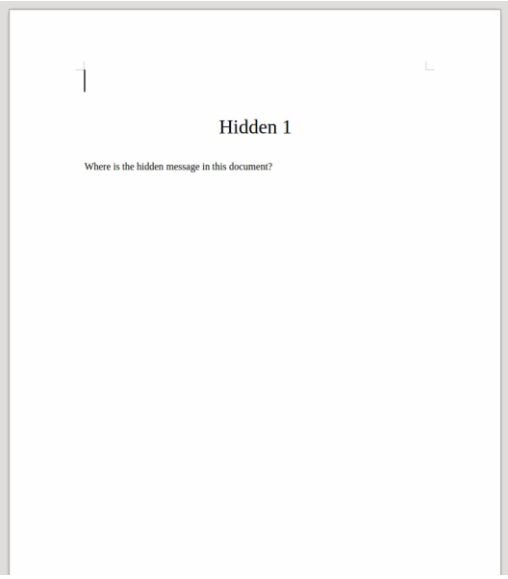

This image appears to be a photo that someone has taken of a black cat sitting inside a cat bed. The cats outline cannot be seen but you can make out the eyes, nose and mouth of the cat. This photo appears to be taken inside a domestic household as the lighting is very even with no diffusion and the background displays what is most likely to be the wooden leg of a chair.

OLE

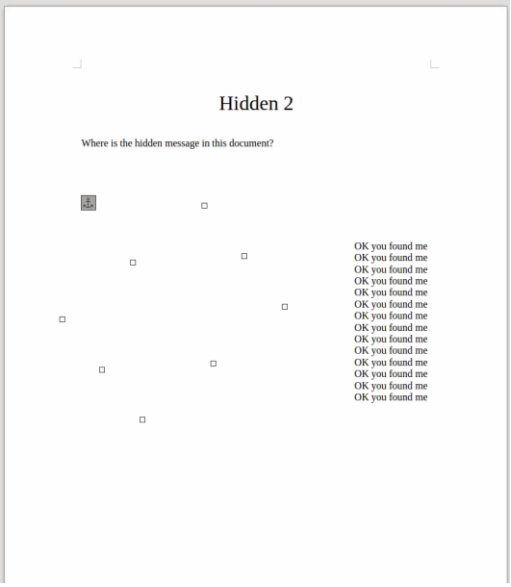

00013304.ole

This file reads “Hidden 1” in 24-point, centred text followed by “Where is the hidden message in this document?” written in 12-point font a line below it. Further analysis reveals that the document is completely empty outside of the two lines of text.

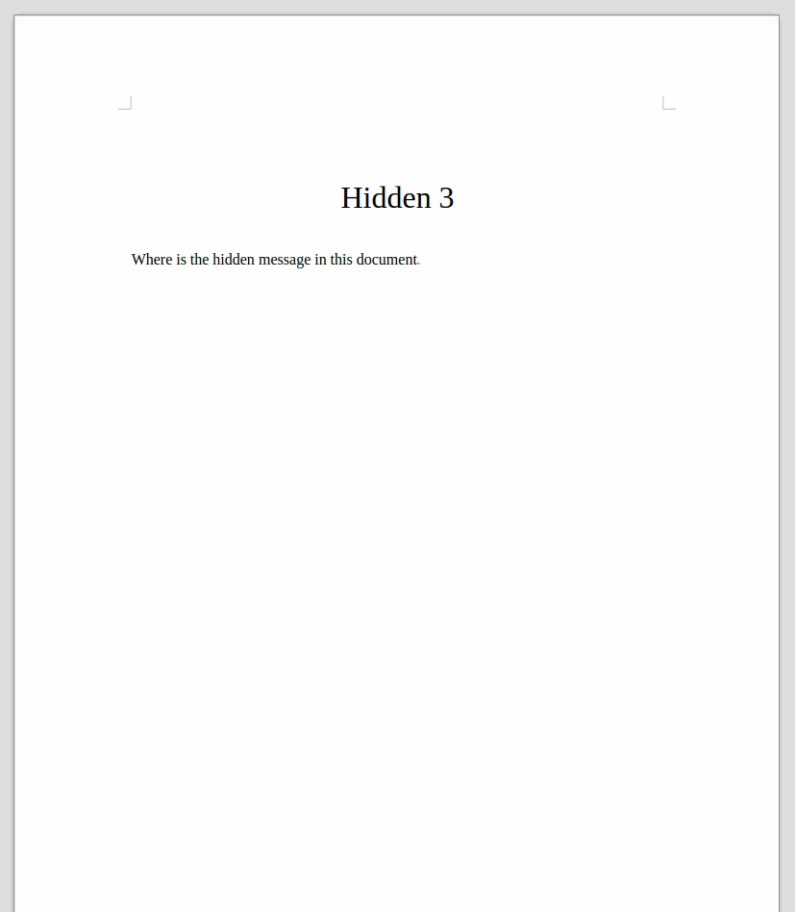

00013344.ole

This file reads “Hidden 1” in 24-point, centred text followed by “Where is the hidden message in this document?” written in 12-point font a line below it. Further analysis reveals that there is an image that is the same colour as the page covering 14 lines of text that read “OK you found me.”

00013384.ole

This file reads “Hidden 3” in 24-point, centred text followed by “Where is the hidden message in this document?” written in 12-point font a line below it. Further analysis reveals that the document is completely empty outside of the two lines of text.

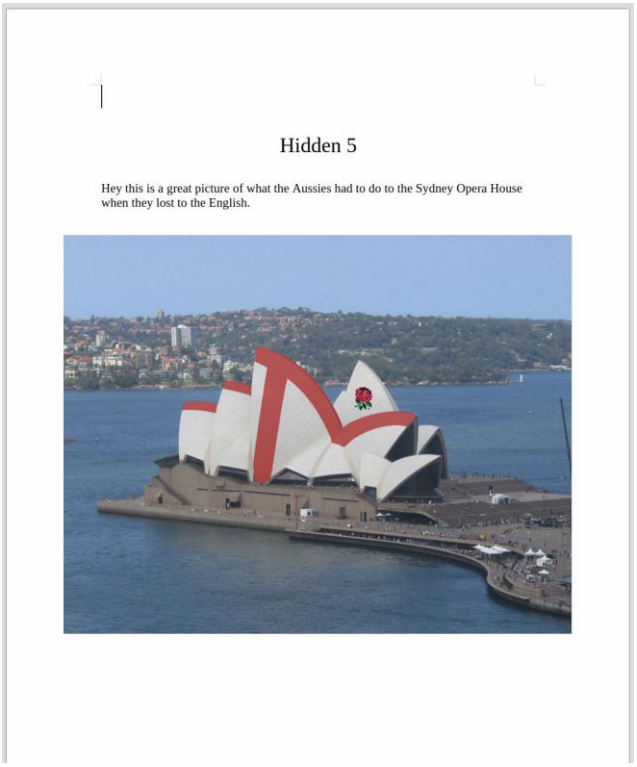

00013472.ole

This file is has suffered too much corruption and cannot be opened.

00013688.ole

This file reads “Hidden 5” in 24-point, centred text followed by “Hey this is a great picture of what the Aussies had to do to the Sydney Opera House when they lost to the English.” written in 12-point font a line below it. Attached to the document is an image which happens to be the very same image as “00013696.jpg.” which depicts the Sydney Opera House painted in the colours of the English flag. Further analysis reveals that the rest of the document is empty.

ZIP

00013650.zip

This ZIP file contains two folders labelled “_rels” and “theme” respectively and an XML file. The “_rels” file is empty while “theme” contains more xml files. Upon further inspection, these files don’t contain anything of particular interest.

00015202.zip

This ZIP file contains two folders labelled “_rels” and “theme” respectively and an XML file. The “_rels” file is empty while “theme” contains more xml files. Upon further inspection, these files don’t contain anything of particular interest. This makes it much the same as “00013650.zip”

PNG

00013844.png

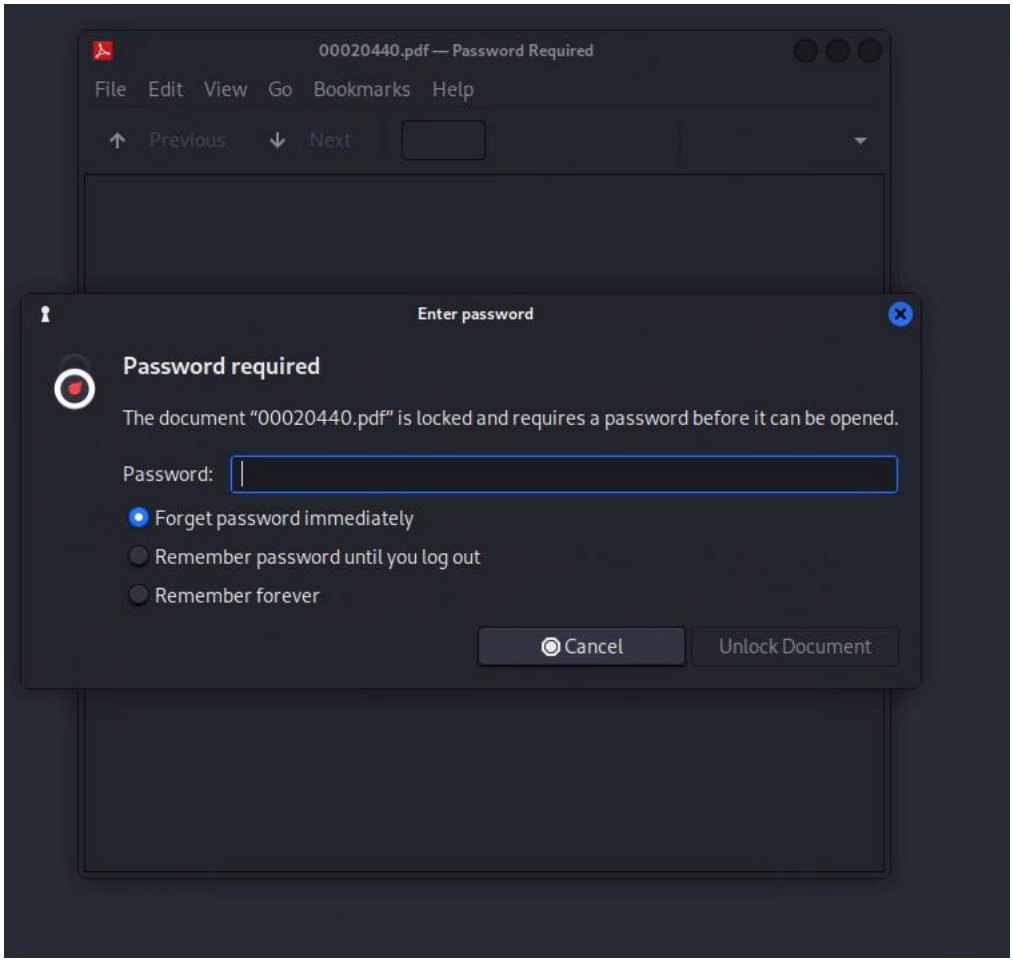

This file depicts an image of an older, orange cat sitting in a washing basket. The cat's face is facing the camera, and its fur is poking through the holes in the basket. The basket appears to be sitting on a wooden table in an area outside that's surrounded by potted plants. The lighting of this image is very even, it appears as if this photo was taken during a sunny day at midday or the afternoon.

PDF

00020440.pdf

This file is locked by a password which implies that it may contain important information but this can't be accessed without additional tools to aid in this investigation.

Analysis

There are several files of note, '0011328.jpg' (the image of the severely damaged connector socket and power board) is concerning but not conclusive evidence of anything. The severe damage may have been deliberately caused which is cause for concern at the minimum. The second file is '00001840.jpg' (the two items on a table which appear to be a briefcase and potentially an iPad or laptop), these two items are reminiscent of forensic imaging devices which are commonly used devices at crime scenes for collecting digital data for forensic investigation.

There are 4 PDF files containing "Hidden" and then a number increasing in numeric order. A PDF is missing due to corruption but given the order of the evidence, we can presume it would be "Hidden 4". One of these files contained an image hiding more text behind it as if they wanted someone to find the text. The other PDF of interest contains an image that is the same as the one in the JPG files – the edited image of the Sydney Opera House. Because it is contained within the PDF files, it is suspicious as these PDF files imply that they want to be investigated. Nothing conclusive can be made of these files but they are strange.

The last file of interest is the PDF because it is password locked, implying that it contains sensitive information. The only conclusion that can be reached is that this 'dd' file requires the use of additional tools to aid in the investigation. Steganography can be conducted on the image files while a password brute force tool could be used on the PDF unless more evidence is found elsewhere.

Artefact Table

Artefacts	**Location**	**Type of Artefacts**	**Contents / Reason behind Compromise**
THREE.dd	Desktop	dd	The main file that contains all the evidence discussed in this document.
